Professional Summary

Senior Software Engineer with 5+ years of experience specializing in **GenAI** and **LLM systems**, with expertise in **multi-agent orchestration**, **RAG architectures**, and **token-level streaming**. Proven track record in building production-grade async FastAPI services with structured NDJSON streaming and seamless Python and C# integration.

Technical Skills

Languages: Python, C#, JavaScript, TypeScript, SQL

Developer Tools: PyCharm, VS Code, Rider, Postman, Docker, CI/CD (GitHub Actions)

Technologies/Frameworks: React.js, FastAPI, AsyncIO, Pydantic v2, LangGraph, LangChain, Qdrant, FAISS, Multi-Agent Orchestration, RAG Architectures, Token-Level Streaming, ASP.NET Core

Experience

Surya Financial Technology Pvt. Ltd.

Jun 2022 – Present

Lead Software Engineer

Bangalore, Karnataka

- Engineered **Intelligent Data Analytics Orchestrator (IDAO)**, a multi-agent RAG-driven system that generates schema-validated SQL queries, analytical summaries, and frontend-ready visualization JSON from natural language inputs.
- Architected an automated **LLM evaluation and guardrail framework** incorporating toxicity detection, jailbreak mitigation, and factuality validation, reducing unsafe outputs by **75%**.
- Built a **RAG-powered Jira support assistant** integrating FastAPI webhooks, Qdrant semantic retrieval, and Gemini Flash to auto-surface similar historical tickets and suggested RCA, reducing ticket resolution time by **40%**.
- Engineered prompt and retrieval optimizations that **reduced LLM token usage by 30%**, significantly lowering inference costs without degrading output fidelity.

Software Development Engineer 2

Aug 2023 – Jul 2025

- Engineered **intent-based semantic report routing system (SmartNav)** using embedding-driven FAISS retrieval to dynamically resolve user intent into structured navigation JSON.
- Replaced manual training data updates with scheduled **Python automation pipelines**, reducing processing time by **70%** while enabling continuous vector refresh in Qdrant and **automated accuracy reporting**.
- Designed strongly-typed event contracts to enforce schema validation across LLM streaming and REST interfaces, preventing runtime schema drift.

Software Development Engineer 1

Jun 2022 – Jul 2023

- Architected API-based backend systems using .NET 7, reducing development cycle time by 20%.
- Built a Roslyn-based code generator to automate WCF-to-WebAPI migration with 95% accuracy, cutting manual effort by 50%.

Surya Software Systems Pvt. Ltd.

Aug 2021 – May 2022

Software Development Engineer 1

Bangalore, Karnataka

- Developed backend modules in C# and ASP.NET for financial analysis systems, improving predictive accuracy by 18%.
- Automated reporting workflows using batch processing and SSRS, reducing reporting time by 35%.

Projects

Adaptive RAG Multi-Agent Personal Assistant | LangGraph, LangChain, Qdrant, Google Gemini

Feb 2026

- Architected a **stateful multi-agent Adaptive RAG system** using **LangGraph** with conditional routing and human-in-the-loop web-search fallback to mitigate hallucinations.
- Leveraged **LangChain** as the orchestration abstraction layer to standardize model I/O, retriever interfaces, and state transitions between Gemini and Qdrant.
- Implemented a cost-efficient local embedding pipeline using **SentenceTransformers** (all-MiniLM-L6-v2, 384-dim) with **Qdrant** cosine similarity search and **Gemini-based** response generation for scalable retrieval.

Education

Kamla Nehru Institute of Technology

Aug. 2017 – May 2021

Bachelor of Technology in Information Technology

Sultanpur, Uttar Pradesh

Accomplishments

- Interviewed, trained, and mentored 20+ engineers, contributing to improved onboarding efficiency and technical capability across teams.
